## 362VXS144-22 VIPER-X INTERIOR STUD

### Geometric Properties

3-5/8" x 1-7/16" flange, Viper-X Studs are manufactured from standard G40 hot-dipped galvanized steel. G60 and G90 coatings are available through special order, and may require up-charges and extended lead times.

### Steel Thickness

| Member       | Design Thickness (in) | Minimum Thickness (in) | Yield (ksi) | Web Sizes (in) | Coating <sup>4,5</sup> | Flange (in) | Return Lip (in) |
|--------------|-----------------------|------------------------|-------------|----------------|------------------------|-------------|-----------------|
| 362VXS144-22 | 0.0235                | 0.0223                 | 57          | 3-5/8          | G40                    | 1-7/16      | 3/8             |

**Notes:** 1. Uncoated steel thickness. Thickness is for carbon sheet steel. 2. Minimum thickness represents 95% of the design thickness and is the minimum acceptable thickness. 3. Knockout size for 1-5/8" Stud is 3/4" x 2". 4. Per ASTM C645 & A1003, Table 1. 5. G60 and G90 available upon request. Will require extended lead time and upcharge.

**Color Code (painted on ends):** Pink & Black

#### ASTM & Code Standards:

- ASTM A653/A653M, A924/A924M, A1003/1003, C645 & C754, E119
- IAPMO ER-0524
- IBC: 2012, 2015, 2018
- CBC: 2013, 2016, 2019
- AISI: S100-07, S100-12, S100-16, S220-11, S220-15

#### LEED v4 for Building and Design Construction

- MR Prerequisite: Construction and Demolition Waste Management Planning.
- MR Credit: Construction and Demolition Waste Management.
- MR Credit: Building Product Disclosure and Optimization – Sourcing of Raw Materials, Option 2.
- MR Credit: Building Product Disclosure and Optimization – Environmental Product Declarations, Options 1 & 2.
- MR Credit: Building Product Disclosure and Optimization – Material Ingredients, Option 1.
- MR Credit: Building Life-Cycle Impact Reduction, Option 4.

#### CEMCO cold-formed steel framing products contain 30% to 37% recycled steel.

- Total Recycled Content: 36.9% ■ Post-Consumer: 19.8% ■ Pre-Consumer: 14.4%

**CSI Division:** 09.22.16 – Non-Structural Metal Framing

### 362VXS144-22 Viper-X Section and Structural Properties

| Yield Stress<br>(ksi) | Web Height, h<br>(in) | Design Thickness <sup>3</sup> , t<br>(in) | Gross Properties |            |                      |                     |                      |                     | Effective Properties  |                       |             |             |         | Torsional Properties          |          |           |           |       | Critical Unbraced Length, Lu (in) |

| 57                    | 3.625                 | 0.0235                                    | 0.567            | 0.167      | 0.346                | 1.440               | 0.045                | 0.518               | 0.336                 | 0.141                 | 4.680       | 4.135       | 0.649   | 30.710                        | 0.124    | -1.009    | 1.834     | 0.697 | 26.88                             |

**Notes:** 1. Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads. 2. Members having a web height to thickness ratio (h/t) value exceeding 260 will not have effective properties listed, only gross properties will be listed. 3. Web height value (h) used for h/t

calculation is the flat width of the web. For (S) members, this is the out to out member size, minus twice the thickness, minus twice the inside bend radius. 4. Members having a flange width to thickness ratio (b/t) value exceeding 60 must be considered for use with the limitations described in AISI S100-16 section B1. 5. Flange width

value (b) used for b/t calculation is the flat width of the flange. For (S) members, this is the out to out member size, minus twice the thickness, minus twice the inside bend radius.

### Non-Composite Limiting Heights – Braced at 48" O.C.

| Depth (in) | Member       | Yield (ksi) | Design Thickness (in) | Spacing O.C. (in) | 5 PSF    |        |        | 7.5 PSF  |        |        | 10 PSF   |         |        |
|------------|--------------|-------------|-----------------------|-------------------|----------|--------|--------|----------|--------|--------|----------|---------|--------|
|            |              |             |                       |                   | L/120    | L/240  | L/360  | L/120    | L/240  | L/360  | L/120    | L/240   | L/360  |
| 3-5/8      | 362VXS144-22 | 57          | 0.0235                | 12                | 20' 8"   | 16' 5" | 14' 4" | 18' 1'   | 14' 4" | 12' 4" | 16' 2' f | 13' 0"  | 11' 5" |
|            | 362VXS144-22 | 57          | 0.0235                | 16                | 18' 11"  | 15' 0" | 13' 2" | 16' 3' f | 13' 2" | 11' 6" | 14' 0' f | 11' 11" | 10' 5" |
|            | 362VXS144-22 | 57          | 0.0235                | 24                | 16' 2' f | 13' 0" | 11' 5" | 13' 3' f | 11' 5" | 9' 11" | 11' 5' f | 10' 4"  | 9' 0"  |

**Notes:** 1. Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads. 2. Lateral loads of 5 psf, 7.5 psf, and 10 psf have NOT been reduced for strength or deflection checks. Full lateral load is applied. 3. Limiting heights are in accordance with AISI S100-16 using all

steel non-composite design. 4. Limiting heights are established by considering flexure (f), web crippling (w) and deflection. 5. Allowable moment is the lesser of M<sub>al</sub> and M<sub>ad</sub>. Stud distortional buckling based on an assumed K<sub>Φ</sub> = 0. 6. For bending, studs are assumed to be adequately braced to develop full allowable moment. 7. Web

crippling check is based on AISI S100-16 section C3.4.2 Condition 1: End One-Flange Loading with 1" end bearing.

|               | 362VXS144-22 | 0.0235         | 0.0223      | 57             | 24                | 16' 5"  | 13' 0" | 11' 4" | 13' 6" f | 11' 4" | 9' 11" | 11' 8" f | 10' 4"  | 9' 0"  |

**Notes:** 1. Web height to thickness ratio (h/t) exceeds 200. Web stiffeners required at all support points and concentrated loads. 2. Lateral loads of 5 psf, 7.5 psf, and 10 psf have NOT been reduced for strength or deflection checks. Full lateral load is applied. 3. Limiting heights are in accordance with AISI S100-16 using all steel non-composite design. 4. Limiting heights are established by

considering flexure (f), web crippling (w) and deflection. 5. Allowable moment is the lesser of  $M_{al}$  and  $M_{ad}$ . Stud distortional buckling based on an assumed  $K\phi = 0$ . 6. For bending, studs are assumed to be adequately braced to develop full allowable moment. 7. Studs are fully braced when unbraced length is less than  $L_u$ . See section properties table for  $L_u$  values. 8. Web crippling check is based on

AISI S100-16 section C3.4.2 Condition 1: End One-Flange Loading with 1" end bearing.

### Allowable Composite Heights for Non-Load Bearing Walls

| Depth<br>(in) | Member       | Design<br>(in) | Min<br>(in) | Yield<br>(ksi) | Spacing<br>(o.c.) | 5 PSF  |         |         | 7.5 PSF |         |        | 10 PSF |         |         |
|---------------|--------------|----------------|-------------|----------------|-------------------|--------|---------|---------|---------|---------|--------|--------|---------|---------|
|               |              |                |             |                |                   | L/120  | L/240   | L/360   | L/120   | L/240   | L/360  | L/120  | L/240   | L/360   |
| 3-5/8         | 362VXS144-22 | 0.0235         | 0.0223      | 57             | 12                | 23'-8" | 18'-9"  | 16'-5"  | 20'-8"  | 16'-5"  | 14'-4" | 18'-9" | 14'-11" | 13'-0"  |
|               | 362VXS144-22 | 0.0235         | 0.0223      | 57             | 16                | 25'-0" | 17'-1"  | 14'-11" | 18'-10" | 14'-11" | 13'-1" | 17'-0" | 13'-7"  | 11'-10" |
|               | 362VXS144-22 | 0.0235         | 0.0223      | 57             | 24                | 18'-9" | 14'-11" | 13'-0"  | 16'-2"  | 13'-0"  | 11'-5" | 14'-4" | 11'-10" | 10'-3"  |

**Notes:** 1. Viper composite limiting heights are based on testing in accordance with ICC-ES acceptance criteria AC86-2012. 2. Limiting heights are established by considering flexure, shear, web crippling, and deflection. 3. No screws are required between stud and track,

except as required by ASTM C754. Composite heights are based on using standard top track. Mechanically fastening of gypsum panel to the stud and track is required. 4. Viper-X composite limiting heights based on a single layer of 5/8" type X gypsum board applied vertically

to both sides of the wall over full height. 5/8" Type X wallboard from the following manufacturers are acceptable: USG, National, Georgia-Pacific, Temple Inland, CertainTeed, American, & LaFarge.

### Screw Allowable Loads (lbs.)

|              |                             |                           |                                  |                                    | Shear                                   | Tension | Shear                                     | Tension | Shear                                     | Tension | Shear                                     | Tension |
| 362VXS144-22 | 0.0235                      | 0.0223                    | 57                               | 65                                 | 174'                                    | 60      | 184'                                      | 71      | 236'                                      | 82      | 152                                       | 93      |

**Notes:** 1. Shear values are tested per AISI S100-16 and S905 procedure. 2. Capacities are based on section E4 of the AISI S100-16 Specification. 3. Capacities are based on Allowable Strength Design (ASD). 4. Screw pull-out capacities are based on listed head diameter. 5. Two sheets of equal thickness and tensile strength are assumed in tabulated values. 6. When materials of different steel

thickness and tensile strength are connected, use the lowest value for shear capacity (tilting and bearing), for pull-out capacity use sheet closest to screw tip and for pull-over capacity use sheet closest to screw head. 7. Where multiple fasteners are used, screws are assumed to have a center-to-center spacing of at least 3 times the nominal diameter. 8. Screws are assumed to have a center-of-screw

to edge-of-steel dimension of at least 1.5 times the nominal diameter of the screw. 9. When screws are subjected to combination of shear and tension forces, interaction equation of AISI S100-16 Specification section E4.5 shall be used.
